Sarah A Bond

Category: AI/AI Wearable Technology

Consumer Behavior Concepts: Motivation, Perceived Risk & Social Influence

Brand: Ray Bans Meta AI Glasses

Introduction: While Artificial Intelligence (AI) has surged in popularity and accessibility, AI exploration began in the 1950s (A timeline of AI, 2023). Wearable AI technology, like Ray Bans Meta AI glasses, is available to consumers. These products appeal to both tech savvy and fashion forward consumers. This report examines how consumers make purchasing decisions about AI, concentrating on the motivators and deterrents, with Ray Bans Meta AI Glasses being the case study.

Research Findings: Consumer Behavior regarding AI wearable devices is influenced not only by price and features, but by the risk perception (RP) a consumer has and their degree of technology acceptance. According to Aysolmaz, Müller, and Meacham (2023), RP is crucial in a consumer's willingness to use AI products. Concerns include privacy violations, misinformation, or inadequate performance. Contrary to RP, the Technology Accessibility Model (TAM) that was developed by Davis (1989), highlights perceived usefulness/ease-of-use as primary factors that drive consumers purchasing AI products. This research highlights that marketing efforts for AI wearable products should focus on decreasing RP while emphasizing the benefits (Photo & video capture, question/answer, social influence/interactions).

Brand Analysis: Ray-Ban Meta leverages Ray Ban sunglasses credibility/iconic image with the advanced technology of Meta to attract multiple audiences. Both fashion forward individuals and technology enthusiasts have something to revel in with Ray Bans Meta AI glasses. For example, the 2025 "Hey Meta, Who Eats Art?" Advertisement emphasizes the product's abilities such as asking Meta questions about what the user is viewing and telling Meta to make a phone call, all

hands free, appealing to the tech savvy audience. Actors chosen for the advertisement such as Chris Hemsworth, Chris Pratt and Kris Jenner all wearing striking fashionable suits (and Ray Ban Meta AI glasses) was strategic, aiming to appeal to the fashion forward who are likely to keep up with trends, which celebrities of status often represent in their fashion choices as well as their credibility/popularity (Ray Ban Meta, 2025).

Conclusion: Ray Ban Meta AI successfully taps into consumer motivations, both fashion/trendy and technology, through strategic marketing. Ray Bans Meta AI positions their products as both chic/trendy and functional/useful. However, consumer concerns with AI products are alive and well, making Ray Bans Meta AI glasses a product that needs to be carefully and thoughtfully marketed to influence consumer behavior. This case study is a great example of how aligning a market strategy with consumer values causes a push in that “add to cart” behavior.
